Nursing

What does it mean to be a registered nurse in an increasingly complex health-care landscape?

How does my knowledge and skills promote health, prevent illness, and facilitate care for people and communities?

How do Registered Nurses contribute to the health of society?

What career trajectories are available to me as a baccalaureate-prepared Registered Nurse?

In our four-year collaborative Nursing program, you'll be prepared to assess and meet the health-care needs of society. You'll develop and learn how to communicate knowledge about nursing practice, and the human experience of health, illness and healing.

From Year 1, you'll utilize our high-tech nursing labs and engage in simulated learning opportunities with the goal of providing practical, hands-on experience using the latest technology.

When you graduate from this program, you're eligible to write the NCLEX-RN examination to become a Registered Nurse.

Become a Registered Nurse committed to excellence in caring. Gain the knowledge and skills relevant to the health of individuals, families, groups, and communities.

What will I study?

- Anatomy and Physiology
- Development of Self as a Nurse
- Health and Healing, Theory and Practice in Diverse Clinical Settings
- Health Assessment
- Interprofessional Health-Care Teams
- Microbiology for Health Sciences
- Nursing Leadership and Innovation
- Pathophysiology
- Pharmacology for Nurses

Clinical placements are a core component in each year of the nursing program, uniquely starting from your first year of studies.

What can I do with my degree?

- Registered Nurse
- Clinical care and education
- Graduate studies and research
- Health administration and management
- Health and clinical data analysis
- Health policy and health promotion
