

# Psychology Bachelor of Science

- Does** the chronic use of drugs lead to permanent changes in the brain?
- Why** do people sometimes see/hear things that aren't there?
- How** do modern pharmaceuticals help treat the symptoms of anxiety and depression?
- How** does our biology and environment combine to make us who we are?
- Is** it possible to augment one's cognitive abilities through practice?
- How** do traumatic events influence a child's development?

Our program is well-suited for you if you're interested in the cognitive and biological underpinnings of human behaviour: neuroscience, cognition, physiology, sensation and perception.

Core teachings in the natural sciences—biology, chemistry, physics and math—and a specialized education in statistics and research methods, will provide you with a strong science-based platform into the foundational areas of psychology: social, cognitive, abnormal, developmental and neuroscience.

You're encouraged to complete an honours thesis and/or a practicum in your fourth year. An internship option is also available.

**Enrol in our four-year Bachelor of Science in Psychology program to find the answers to these questions and more.**

## What will I study?

- Clinical Disorders
- Cognitive/Emotional Processing
- General Science courses in Biology, Chemistry and Physics
- Normal and Abnormal Development
- Physiological and Neural Mechanisms
- Social/Group Processes
